WHO ARE WE ?

Since 1982, GEOSTAFF has been specialising in fire-protective products for passive fire protection, designed to meet the highest building industry standards.

The passive fire protection consists of integrating fire-stop systems into constructions, which will limit the spread of fire and smoke. Passive fire protection means:

Protection of individuals, allowing the occupants to evacuate the building in complete safety,

Protection of property, containing the fire for as long as possible while awaiting the emergency services.

As a pioneer in the field, the Geostaff team is constantly innovating in order to push safety standards to the highest level. Tested in certified laboratories, our systems excel in the most drastic tests in line with the latest European standards.

As a European manufacturer of 100% natural GRG* products, GEOSTAFF offers the following product ranges:

GEOTEC® for the construction of ventilation and smoke extraction ducts, for the fire-protection of service ducts and shafts and the protection of epoxy bonded reinforcement systems on concrete slabs and beams. The GEOTEC® range allows you to build fire safe solutions up to 120 minutes.

GEOFLAM® for the construction of ventilation and smoke extraction ducts and the fire-protection of service ducts and shafts. The GEOFLAM® range allows you to build fire safe solutions up to 240 minutes.

GEODECO® decorative range manufactured for the decoration of hotel suspended ceilings, luxury homes and castles.

*GRG: Glass Reinforced Gypsum (GRG) uses a combination of plaster and fiberglass. Glass Reinforced Gypsum is a more resistant plaster that allows the realization of our fire-protective elements and guarantees the excellent resistance and strength of our boards.

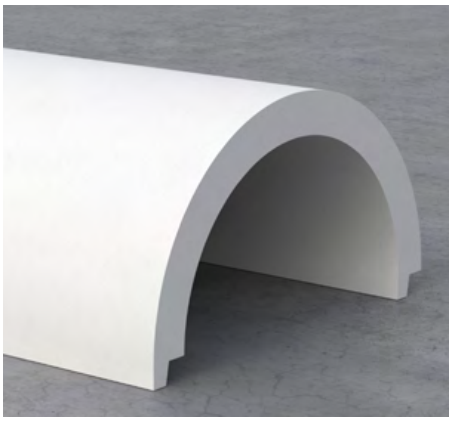
EI 90/120 S
Glue & Screw assembly
Glue & Staple
Glue & Fiber reinforced gypsum

Geostaff offers, through the GEOTEC® and GEOFLAM® ranges, various models and dimensions of fire protective boards for the construction of ventilation and smoke extraction ducts; the fire-protection of service ducts; the protection of carbon fiber bonded beams as well as for the protection of cable trays.

Fire protective board GEOTEC®S

In order to meet all requirements for passive fire protection, Geostaff also produces pre-moulded fire-resistant elements for the protection of service ducts and shafts (for electrical cables, both combustible as non-combustible pipes and ducts : gas, medical fluids/gasses, air, combustibles...), for the protection of metal columns and fire-resistant inspection hatches.

Prefab C-Light pre-moulded element



GEOFLAM®DC pre-moulded element

ICONS

Reaction to fire
A1 classification in accordance with fire resistance classification standard **EN 13501-1.**

European Conformity
Based on the European Assessment Document **(EAD) n° 350142-00-1106** : "Fire-protective board, slab and mat products and kit".

ETA 18/0343
GEOTEC®S : European Technical Assessment **18/0343.**

ETA 15/0654
GEOFLAM®F : European Technical Assessment **15/0654.**

ETA 15/0653
GEOTEC®F-Light : European Technical Assessment **15/0653.**

Indoor air emission
Labelling of construction products Level of volatile pollutant emissions from the product A+ : Very low emissions.

Ventilation
Ventilation duct certificate according to the fire resistance test standard EN 1366-1.

Smoke extraction
Smoke extraction duct certificate according to the fire resistance test standard EN 1366-8.

Fire protection services
Service ducts and shafts certificate according to the fire resistance test standard EN 1366-5.

Carbon protection reinforcement
Protection of epoxy bonded reinforcement systems on concrete slabs and beams.

Fire-resistant inspection hatches
1 and 2 hours fire-protection

Glue + Screw
[Duct internal dimension ≤ 2500 x 1500 mm].

Glue + Staple
[Duct internal dimension ≤ 1250 x 1000 mm].

Glue + Fiber reinforced gypsum
[Duct internal dimension ≤ 2500 x 2000 mm].

Geocol® Glue
Powder-coated adhesive especially formulated for mounting GEOFLAM® and GEOTEC® boards.

Paint application
A water-based acrylic paint may be applied to GEOTEC®S products without compromising their fire-protection properties.

Easy cutting
The product can be cut using a circular saw or a sabre saw.

Easy cutting
The product can be cut using a handsaw.

Water-repellent treatment
It is possible to apply a water-repellent treatment that does not alter the A1 classification by addition of water-repellent (option).

Environmentally friendly products
100% natural gypsum-based products meeting environmental and health standards (FDS) and observing safety standards (FDES).

Tailored dimensions
Tailored dimensions are delivered according to your project needs.

Duct palettizing
Palletizing of the products by ducts is possible.

Online calculation tool
Calculate your material requirements for the construction of all your GEOSTAFF systems online.

Transportation
Product must be transported and stored on a flat and protected surface.

Storage
Product must be kept away from water.

GRG
Glass Reinforced Gypsum.

Lightweight board

PROTECTING YOU FROM FIRE IS WHAT WE DO

How can we fulfil our mission and protect you in case of a fire?

Our first objective is to introduce fire-stop solutions inside all types of buildings (private, public, industrial, etc.) that will limit the spread of fire and smoke. These solutions are defined by the installation of horizontal and vertical smoke extraction and ventilation ducts, the protection of technical ducts, the fire protection of various electrical cable trays, but also the installation of fire-resistant access hatches. All our products are designed with the aim of making these solutions possible and are tested and classified in accordance with all the existing European standards.

Ventilation and smoke extraction ducts

The construction of a ventilation or smoke extraction system involves using a flow of air to flush the space to be cleared of smoke. This means clearing smoke on the one hand (smoke extraction duct or high-level ventilation) and bringing in fresh air on the other (ventilation duct or low-level ventilation).

Two cases are therefore possible:

Protecting the internal volume of a duct from fire, the common expression "external fire" using ventilation ducts or introduction of air (low-level ventilation).

In the rooms that it crosses, protecting the entire length of ducting from an "internal" fire, using smoke extraction ducts (high-level ventilation).

Please refer to the chapter "SMOKE EXTRACTION AND VENTILATION DUCTS" from page 29.

Fire protection of service ducts and shafts

The service duct is defined as a usually accessible enclosed volume containing combustible or non-combustible service installations such as pipes or cables.The main purpose of the fire resistant protection of service ducts and shafts is to prevent fire from spreading from one room to another through these service installations or to protect these installations from fire and guarantee their functionality.

Protection to epoxy bonded reinforcement systems on concrete slabs and beams

The fire stability of reinforced concrete structures and substrates is obtained by restricting the temperature rise in the steelwork within the concrete.

GEOSTAFF® proposes validated solutions using GEOTEC®S to protect the carbon fibre reinforcements installed under the floor slab and concrete beam, depending on the desired levels of fire performance and the critical temperatures provided by the manufacturer.

Fire-resistant inspection hatches

GEOSTAFF fire-resistant inspection hatches can be installed both in our fire protective systems as standardized constructions to access inside the service ducts. They allow inspections and enable repairs.

Fire classification and tests standards

Geostaff products are tested and classified in accordance with all European standards in force.

Fire resistance classification standards

EN 13501-1

Fire classification of construction products and building elements - Part 1 : Classification using test data from reaction to fire tests.

EN 13501-2

Fire classification of construction products and building elements - Part 2 : Classification using data from fire resistance tests, excluding ventilation services.

EN 13501-3

Fire classification of products and construction elements - Part 3: Classification using fire resistance test data for the products and elements used in maintenance installations: fire-resistant ducts and fire dampers.

EN 13501-4

Fire classification of products and constructional elements - Part 4: Classification based on fire resistance test data for the components of smoke control systems.

Fire resistance tests standards

EN 1366-1

Fire resistance tests for plant installations - Part 1: Ducts.

To obtain a ventilation duct certificate, tests in accordance with EN 1366-1 (horizontal and/or vertical ducts type A and B, as defined in the standard) are required.

EN 1366-5

Fire resistance tests for service installations - Part 5 : Service ducts and shafts.

EN 1366-8

Fire resistance tests for service installations - Part 8: Smoke extraction ducts.

To obtain a certificate for a smoke extraction duct, tests in accordance with EN 1366-1 and 8 (horizontal and/or vertical ducts type A, B and C, as defined in the standard) are required.

Declaration of performance in accordance with CE product standard EN 12101-7 for factory-made duct sections : contact Geostaff for the possibilities.

SOLUTION		Fire-rated performance	Classification standards	Fire-resistant tests
EN 1366-1	**Horizontal and vertical ventilation ducts**	EI 30/60 - 90 /120 - 180 - 240 (S)	EN 13501-3	EN 1366-1

CE Marking

To guarantee the performance of our fire protection systems, Geostaff decided, by means of a daily product inspection, to implement annual third party certification audits to obtain CE marking of fire-protective boards.

The different CE markings of our products have been made according to the European Assessment Document (EAD) n° 350142-00-1106 : "Fire-protective board, slab and mat products and kit". They were created within the framework of the European legislation and certify the conformity of our products with the declared performances.

The ETA numbers corresponding to Geostaff products are as follows:

GEOFLAM®F : European Technical Assessment ETA n° 15/0654

GEOFLAM®F-Light : European Technical Assessment ETA n° 15/0653

GEOTEC®S : European Technical Assessment ETA n° 18/0343

For all Geostaff products with the CE marking, the Declarations of Performance for these products are available on the www.geostaff.fr website.

Classification criteria

E: Integrity (flames and hot gases)

I: Thermal insulation (temperature on the unexposed side < 140°C on average or 180°C at a point)

t: Duration of the classification expressed in minutes

S: Smoke leakage (leakage per unit surface area < 10 m^3/hr.m^2 for ventilation, 5 m^3/hr.m^2 for smoke extraction)

ve: Vertical position of the duct being tested

ho: Horizontal position of the duct being tested

o --> i: Direction of the "external" fire

i --> o: Direction of the "internal" fire

i <--> o: Arbitrary direction of the "internal" or "external" fire

Multi: Indicates that the smoke extraction duct can extract smoke from several compartmentalised zones

Service pressure: Indicates the positive and negative pressures at which the duct was tested

Example of classification

EI 60 : HORIZONTAL & VERTICAL Fire rated ventilation duct with 30 mm GEOTEC®S fire-protective boards. (Dimension up to 2500 x 1500 mm)

E	I	t	ve	ho	i	<-->	o	S
E	I	60	ve	ho	i	<-->	o	S

EI 120 : HORIZONTAL & VERTICAL Fire rated multi-compartment smoke extraction duct with 45 mm GEOTEC®S fire-protective boards. (Dimension up to 2500 x 1500 mm)

E	I	t	S	ve	ho	Service pressure	Multi
E	I	120	S	ve	ho	-1500 Pa / +1500 Pa 500Pa	Multi

EI 120 : HORIZONTAL & VERTICAL Fire rated protection of service ducts and shafts with 45 mm GEOTEC®S fire-protective boards. (Dimension up to 2500 x 1500 mm)

E	I	t	ve	ho	i	<-->	o
E	I	120	ve	ho	i	<-->	o

Why choosing the Geostaff solution ?

By choosing Geostaff fire-protective products you can now have the solution that best fits your needs.

CERTIFIED SOLUTION

The Geostaff boards are made in France with respect of the highest European quality standards in addition to CE* certification under a **DOP***.

Geostaff has tested the widest range of solutions with respect to large dimensions, complex shapes, extra standards pressure levels or wall penetrations. These solutions cover beyond the basic requirements for fire rated ventilation ducts (EN 1366-1), multi compartment smoke evacuation ducts (EN 1366-8) and the protection of services (EN 1366-5).

Geostaff products are meeting environmental and health standards ("Fiche de Déclaration Environnementale et Sanitaire": **FDES**) and are observing safety standards ("Fiche de Données de sécurité" : **FDS**).

Please visit our website to find our products safety standards : www.geostaff.fr

*CE : European Conformity
*DOP : Declaration Of Performance.

ONE SHOP STOP SOLUTION

The online calculation tool enables you to calculate your material requirements for all the Geostaff solutions. Besides generating a full Bill of Material (BoM) that allows the Geostaff partners to have a perfect view and control on the material costs, a technical drawing is provided for the various duct section.

Please visit our website and ask for your login to access our online calculation tool.

Also, Geostaff has an extended stock to meet short delivery times.

TAILORED AND FLEXIBLE SOLUTION

Geostaff uses Glass Reinforced Gypsum to mould the various board dimensions and accessories. The tailored boards allow a quick installation with a minimum of material waste.

Geostaff material is characterized by an easy manipulation. The boards can be cut both manually as mechanically. The plaster-based GEOCOL® glue is used on the joints both as glue and as a filler (maximally 1/3 rd of the board thickness). It allows larger tolerances during installation hence minimizing material waste and maximizing installation speed.

The pre-molded accessories have a perfect fit and are easy to install.

Products are easily paintable and a water-repellent treatment is optional.

EXPERTISE AT YOUR SERVICE

Our engineers and specialists are at your service to search for the best certified solution for your project. In combination with our logistical team, we can deliver specific duct sections on separate pallets to prosper installation time. Please contact us for more details.

Our installation methods

EI 30 - 60 S EI 90 - 120 S	Glue + screw	GEOTEC®	Duct internal dimension ≤ 2500 x 1500 mm
EI 30 - 60 S EI 90 S	Glue + staple	GEOTEC®	Duct internal dimension ≤ 1250 x 1000 mm
EI 30 - 60 S EI 90 - 120 S	Glue + fiber reinforced gypsum	GEOTEC®	Duct internal dimension ≤ 2500 x 2000 mm
EI 180 S	Glue + fiber reinforced gypsum	GEOFLAM® FX	Duct internal dimension ≤ 2500 x 2000 mm
EI 90 - 120 S	Glue + fiber reinforced gypsum	GEOFLAM® F Light	Duct internal dimension ≤ 1250 x 1000 mm

Additional technical data

Airflow performance

Hot sealing: Classification S in accordance with standards EN 1366-1 and 1366-8

i.e. a leakage flowrate per unit surface area of <10 m^3 /hr.m^2 for ventilation ducts and < 5 m^3/hr.m^2 for smoke extraction ducts.

Cold sealing: Class D in accordance with standard EN 1507

Class	$m^3.s^{-1}.m^{-2}$	$m^3.h^{-1}.m^{-2}$
A	$0.027 \times p^{0.65} \times 10^{-3}$	$0.0972 \times p^{0.65}$
B	$0.009 \times p^{0.65} \times 10^{-3}$	$0.0324 \times p^{0.65}$
C	$0.003 \times p^{0.65} \times 10^{-3}$	$0.0108 \times p^{0.65}$
D	**$0.001 \times p^{0.65} \times 10^{-3}$**	**$0.0036 \times p^{0.65}$**

Pressure drop

The GEOTEC® system also addresses the basic principles of air conditioning techniques with a roughness factor for untreated internal walls similar to that of steel ducts, i.e. Ɛ = 0.05 mm (for the smooth surface of the panel only).

Acoustic performance

Acoustic attenuation with lining

With the aim of restricting airborne noise propagated by the ducts and hence providing better acoustic performance, Geostaff proposes solutions for attaching a lining to the GEOTEC® ducts; the characteristics are listed in the table below:

Thickness GEOTEC® S	$R_W(C; C_{tr})$ dB		
	1 BA13 + LdV 45 mm	2 BA13 + LdV 45 mm	3 BA13 + LdV 85 mm
30	49 (-3;-9)	53 (-2;-7)	57 (-1;-4)
45	50 (-2;-7)	54 (-1;-6)	60 (-1;-4)

Rw + C : Acoustic attenuation to indoor noise
Rw + Ctr : Acoustic attenuation to outdoor noise
BA13 : Standard plasterboard (13 mm thickness)
LdV : glass wool
dB : decibel

Seismic performance

To guarantee that the GEOTEC® system works properly in seismically active zones or in buildings subject to significant vibration such as airports, stations or even underground car-parks, GEOTEC® ducts have been validated in accordance with the S2 set of spectra at 5% damping as per standard CRT 91 C 112 00. Carried out by the SOPEMEA laboratory (RE 1E31169ME), these calculations showed the excellent resistance to seismic activity and vibration of the GEOTEC® system.

Performance under damp conditions

Where ventilation or smoke extraction ducts are constructed in rooms where the humidity is high, we propose that our products be treated with a water repellent. This treatment is applied to the bulk of the material, and does not alter the fire resistant properties of the products in any way.

PRODUCTS

1. FIRE PROTECTIVE BOARDS 14

GEOTEC® S30 - S45 EI 60 (S) / EI 120 (S) 15
GEOTEC® SX30 - SX45 EI 60 (S) / EI 120 (S) 16
GEOFLAM® FX50 EI 180 (S) 17

2. FIRE PROTECTIVE CHANNEL 18

PREFAB C-LIGHT - EI 120 (S) 18

3. FIRE RESISTANT ACCESSORIES 19

GEOTEC®S FIRE-PROTECTIVE BOARD

GEOTEC® S30

GEOTEC® SX45

GRG

Strength and resistance

GEOTEC®S boards are made of **GRG.**
GRG or Glass Reinforced Gypsum is a more resistant plaster that allows the realization of our fire-protective elements and guarantees the excellent resistance and strength of our boards.

Lightweight board that is easy to handle

Duct with a fire resistance of 60 minutes (EI 60 S) : GEOTEC®S 30mm: 22.5 kg/m^2.
Duct with a fire resistance of 120 minutes (EI 120 S) : GEOTEC®S 45mm : 34 kg/m^2.

A board that fits all types of ducts

The **GEOTEC® S board** is available in sizes from 200 x 1000 mm up to 1100 x 1000 mm with 50 mm intervals. For instance, for a duct of 300 x 500 mm EI 120 S in 45 mm, you will need 900 and 550 mm GEOTEC® S 45 boards.

The **GEOTEC® SX** standard dimensions board is available only in 1200 x 1000 mm.
Please consult our online calculation tool to calculate your bill of materials available for all your projects.

Reaction to fire

A1 according to the fire classification standard **EN 13501-1.**

CE

Tested and classified in accordance with all European standards in Force

CE marked fire-protective board according to EAD n° 350142-00-1106 and Declaration of Performance available (DOP).
European Technical Assessment **ETA n° 18/0343**.

Respect for environmental and safety standards

Meeting environmental and health standards (declaration form : FDES) and observing safety standards (FDS).
Compliance with the A+ criteria concerning the respect of indoor air quality for GEOTEC® products.

GEOTEC® A Ventilation grille

Dimensions

Thickness (mm)	EI (mm)	Length (m)	Width (mm)
50	120	95 x 95	0,3

E = Fire sealing / I = Thermal insulation
** In accordance with extension EFR-14-003037 of docs. 12-A-698 Rev.1 and EFR-14-A-001050 Rev.1*

Characteristics

Description	Fire-protection ventilation grille
Operation	The slats begin to react over 100°C
Operating pressure	-5 to +10 Pa
Safety position	Horizontal slats
Direction of air circulation	Any
Fire-side	Any
Temperature of usage	Max. 60 °C
Environment	For internal use
Maintenance	Maintenance free
Acidity	pH 8.91

PRODUCT DESCRIPTION

Square **GEOFLAM®G** fire-protection ventilation grilles can be installed in the **GEOFLAM®** protective systems for horizontal and vertical service conduits, to avoid heating of electrical cables for example when protecting a cable tray. These grilles are made of plastic profiles filled with bands of intumescent material. These provide fire resistance up to EI 120.

ADVANTAGES

- Approved for installation on **GEOFLAM®** protective ducts
- Maintenance free
- Easy to install

STORAGE AND HANDLING

For safety's sake, these grilles should be stored and handled with care.

CAUTION:

- AVOID ANY DAMAGE
- AVOID CONTACT WITH WATER
- KEEP AWAY FROM HEAT

MAINTENANCE AND CLEANING

Clean with a soft dry cloth.
Do not use abrasive sponges, alkaline or acid detergents, or volatile solvents such as alcohol or other solvent-based products. Use of such products may damage the grille.

INSTALLATION

- The grille can be installed with its slats horizontal
- Installation must comply with extension EFR-14-003037
- Fire-protectioon grilles cannot be used for forced-air ventilation.

GEOCOL® Adhesive 25 kgs

APPLICATIONS

- EN 1366-1 — Ventilation
- EN 1366-5 — Fire protection services
- EN 1366-8 — Smoke extraction
- CARBON PROTECTION — Carbon protection reinforcement

PRODUCT DESCRIPTION

Powder-coated adhesive especially formulated for mounting GEOFLAM® and GEOTEC® boards.
Also suitable for bonding various building materials: plasterboard, plasterboard tiles, aerated concrete block, etc.
Can also be used for top coating on most substrates.

The plaster-based GEOCOL® glue is used on the joints both as glue and as a filler (maximally 1/3 rd of the board thickness). It allows larger tolerances during installation hence minimizing material waste and maximizing installation speed.

COMPOSITION AND APPEARANCE

Gypsum, calcium carbonate, resin and various additives.
White plaster.

TECHNICAL DATA

Reaction to fire A1 according to EN 13501-1
Operating time: approx. 2 hours depending on ambient conditions.

AVERAGE CONSUMPTION

1 bag of glue = 10 to 15 m2.

DRYING TIME

5 to 6 hours depending on the ambient conditions.

MIXING RATE

Approximately 12 to 14 L of water per 25 KG bag.

PERMITTED SUPPORTS

Gypsum tiles, water-repellent or not / Gypsum / Cellular concrete.

COATING

All types of products except cement-based products.

PRECAUTIONS FOR USE

The temperature during application and drying must be between 5 and 30°C. Do not use paste that has begun to harden. Do not use for outdoor purposes.

SUBSTRATE PREPARATION

The supports must be dry and free of dust.

PACKAGING

25 kg bags.

TRANSPORT AND STORAGE

Transport and store on a flat and protected surface (out of water), in a cool and dry place, protected from frost and heat.

SHELF LIFE

6 months in original unopened packaging.

Polyurethane foam

APPLICATIONS

EN 1366-1 Ventilation

EN 1366-5 Fire protection services

EN 1366-8 Smoke extraction

PRODUCT DESCRIPTION

Soudafoam FR is a single-part, self-expanding polyurethane foam that can be used upside down. Soudafoam FR serves to ensure the degree of fire resistance of ducts and conduits passing through walls.

TECHNICAL CHARACTERISTICS

Base: Polyurethane
Consistency: Stable foam
Curing system: Polymerisation due to humidity in the air
Resistance to temperature: -40°C to + 90°C (cured)

PACKAGING AND STORAGE

750 ml aerosol can
Always store Soudafoam FR in an upright position in a cool dry place.
The foam will last for 12 months in its closed packaging.

Mineral Fiber Rope

APPLICATIONS

EN 1366-1 Ventilation

EN 1366-5 Fire protection services

EN 1366-8 Smoke extraction

PRODUCT DESCRIPTION

Ensuring the degree of fire resistance for expansion joints, mineral fiber ropes are available in diameters from 20 to 60 mm. Mineral fiber roll is mainly used for expension joint element on vertical ducts.

TECHNICAL CHARACTERISTICS

Material: Basalt "bio soluble" mineral fibers.
Density: 270 ± 25 kg /m^3.
Melting temperature: 1200°C.
Complete immersion water absorption at 20°C: 11 to 12 %, saturation after 7 days, returns to initial weight in 48 hours.
Good acoustic and thermal insulation, 0.08 W/m°K.

PACKAGING

20 m roll.

1. SYSTEM GENERAL OVERVIEW

Ducts are made by juxtaposing **GEOTEC®S** boards of length 1000 mm and of 30 or 45 mm thickness. These systems are available for fire classifications EI 30 S to EI 120 S (in accordance with standards EN 13501-3 and EN 13501-4).
All boards are moulded to standard dimensions with rabbets to facilitate their assembly (30 mm : 2-sided; 45mm : 4-sided).
Each 1000 mm long cuttable segment comprises four or more boards.

Certificates: fire resistance classification report

	Tests in accordance with EN 1366-1 and 1366-8	Thickness (mm)	EI S	Internal cross-sections (mm)	Service pressure (Pa)	EFECTIS classification documents

		45	90/120			

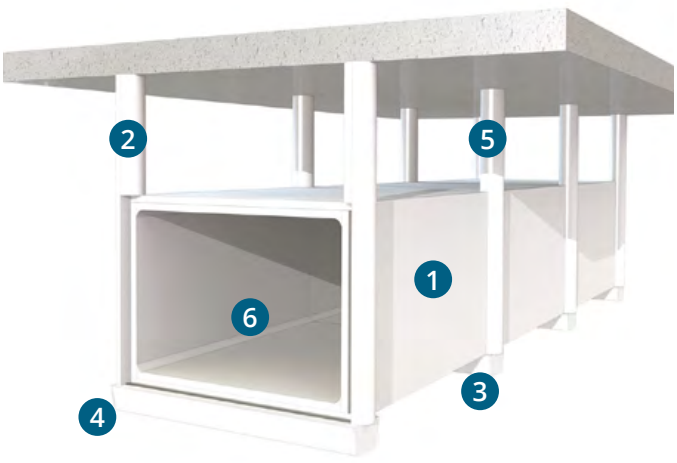
E = Integrity / I = Thermal insulation / S = Smoke-tightness

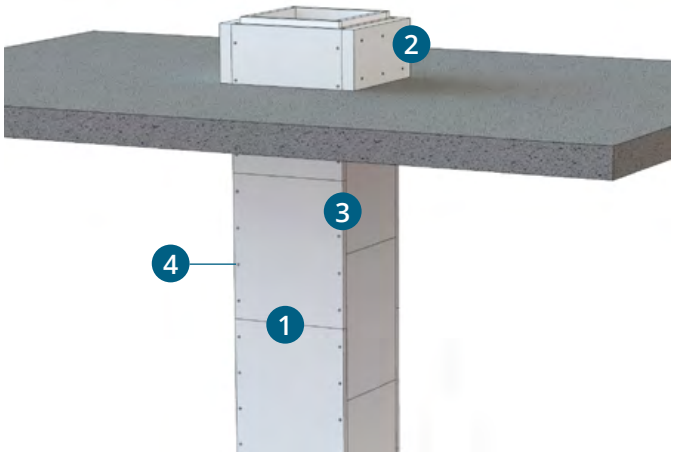
Horizontal system



1. GEOTEC®S 30 or GEOTEC®S 45 fire-protective boards **(EI 30/60 S and EI 90/120 S)**
2. GEOTEC®A 1/2 shells
3. GEOTEC®A U-plaster element
4. **21x41x21** steel U profile, **Ø8** nut and washer
5. **Ø8** anchor brass and threaded rod
6. GEOCOL® glue

To make your assemblies easier, Geostaff privileges the use of the Ø8 threaded rod and 41x21 steel U-profile.
All screw heads can be hidden by glue for easthetic reasons.

Vertical system



1. GEOTEC®S 30 or GEOTEC®S 45 fire-protective boards **(EI 30/60 S and EI 90/120 S)**
2. GEOTEC®A* reinforcement collar
3. GEOCOL® glue
4. VBA screws
   Ø 5 x 80 (EI 30/60 S)
   Ø 5 x 90 (EI 90/120 S)

* Other load-bearing methods in chapter : 3.3.Alternative support principles (from page 75).

2. HORIZONTAL SYSTEM

2.1. Assembly principle

The boards are assembled using VBA screws or staples. Screws are inserted without pilot holes. All joints are previously treated with **GEOCOL®**glue.

Horizontal ducts are formed from 1000 mm sections; the boards are mounted without offset on the horizontal and vertical joints. However, in order to facilitate the installation, the upper boards can be offset from the rest of the duct.

+ Any spaces of less than 10 mm between board junctions must be filled in over the entire thickness with GEOCOL® glue.

+ Eventual repairs can be treated by bonding and screwing an extra thickness of the board with an overlap equivalent to the thickness of the board.

1000 < w ≤ 1250 mm	Use solution 1 or 2 above and replace Ø8 threaded rods for Ø10 threaded rods.		-
	Special configuration: Use a second 21x41x21 steel U-profile + an additional Ø8 threaded rod.	**Special configuration**: Use a second 21x41x21 steel U-profile protected by **GEOTEC® A U-plaster** element and use an additional Ø8 threaded rod protected by **GEOTEC® A Half shell.**	54

Standard installation principle

CLICK and watch
THE HORIZONTAL DUCT ASSEMBLY on video.

1

- Mark out every 1000 mm
- Drill Ø10 holes
- Install Ø8 brass anchors
- Screw up the Ø8 threaded rods

2

- Install steel U-profiles every 1000 mm

3

- Install the lower board

4

- Glue the board edgings
- Screw the side boards with VBA screws every 120 mm or use staples

5

- Glue the board rabbets
- Install the upper board
- Screw with VBA screws every 120 mm or use staples

6

- Glue and install the protective plaster U-profiles against the underside of the lower board

7

- Glue and install the 1/2 shells to protect the threaded rods

8

- Repeat from step 3
- Glue and fit together with the previous section

W int ≤ 600 mm

Standard installation principle : see page 34.

W int ≤ 600 mm
EI 30 / 60 (S) and EI 90 / 120 (S)

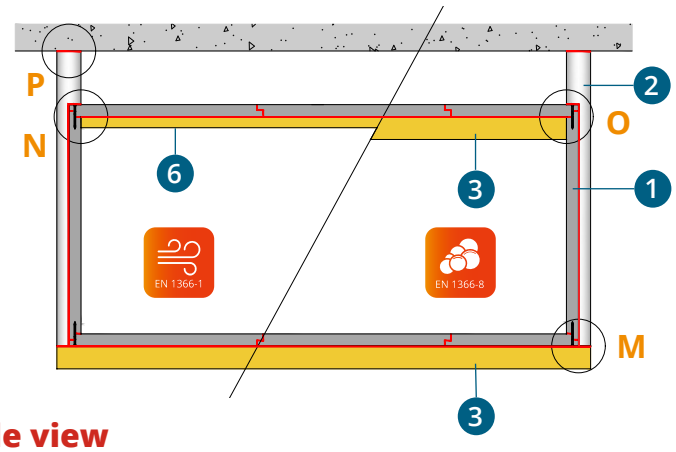
2.3. Alternative support principles

In response to the difficulties experienced on construction sites, Geostaff offers alternative solutions to support the ducts.

A) Suppression of the inner rod Ø8 for large ducts

In the case of ducts with an internal width of **1250 < w ≤ 2500 mm**, it is possible to remove the 3rd internal rod by replacing the external rods with rods of **Ø10** and by using appropriate **steel U-profiles** (upper and lower) according to the supplier's certification.

Front view



Side view

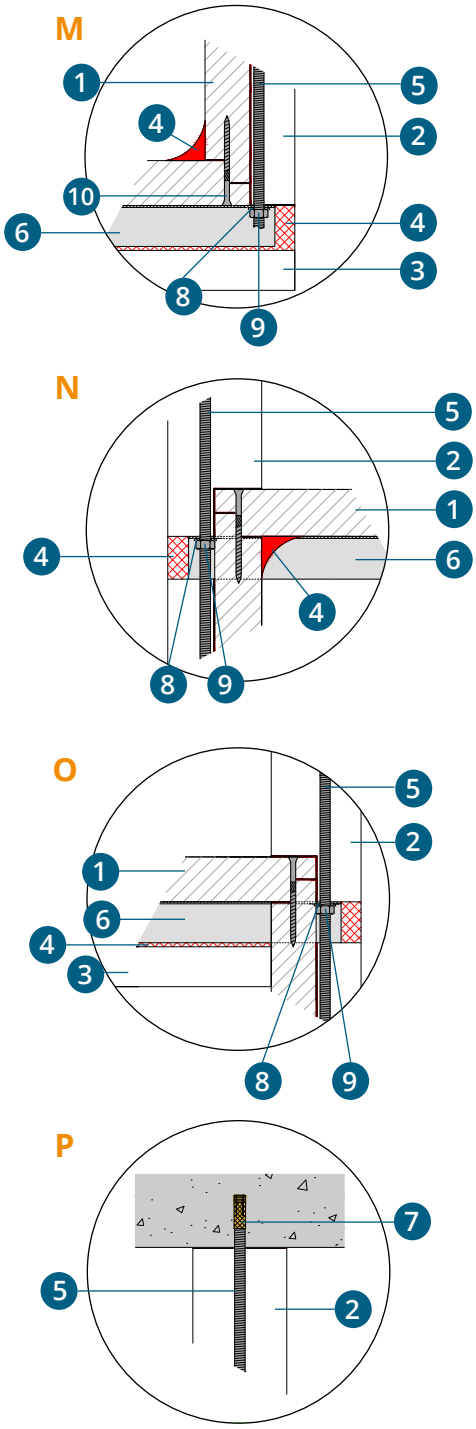
2. GEOTEC® A 1/2 shell
3. GEOTEC®A U-plaster element (appropriated according to supplier's certification)
4. Geocol® Glue
5. Threaded rod **Ø10**
6. Steel U profile (appropriated according to supplier's certification)
7. Brass anchor **Ø10**
8. Galvanized washers **Ø10**
9. Galvanized nuts **Ø10**
10. VBA Screws **Ø 5 x 80** (EI 30/60) / **Ø 5 x 90** (EI 90/120

1250 < w ≤ 2500 mm
EI 30 / 60 (S) and EI 90 / 120 (S)

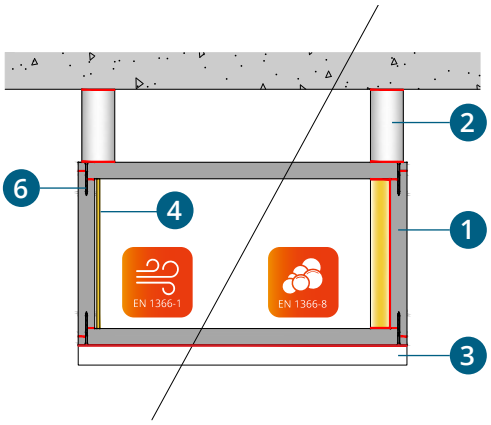
Extension 17/7 on EFR-16-002202
Extension 17/6 on EFR-16-002203



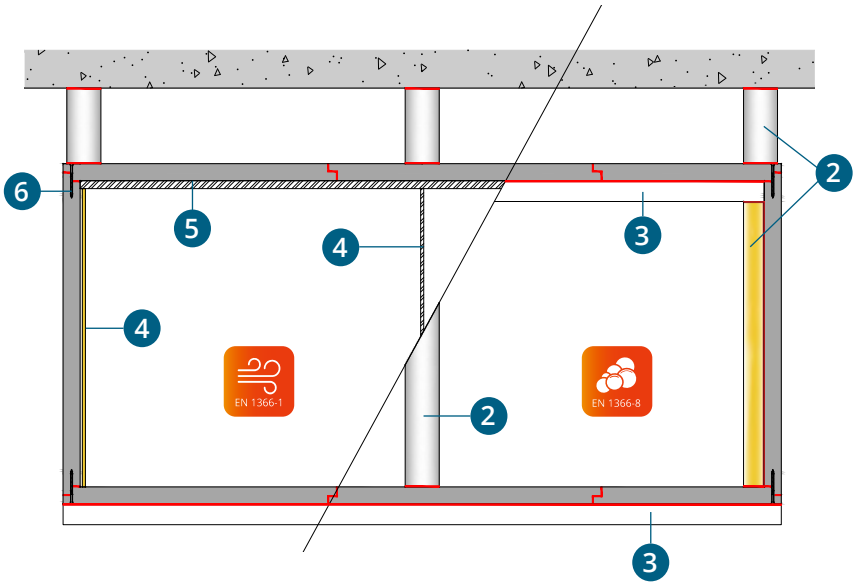
B) Decrease of the duct overall dimension

If it is necessary to reduce the overall dimensions, it is possible, by positioning the threaded rods inside the ducts, to reduce the external width of the ducts (10 cm).

Front view: small section



Side view: large section



0x0 mm to 2500x1500 mm

Extension 17/7 on EFR-16-002202
Extension 17/6 on EFR-16-002203

D) Installation of the duct on a bracket

When the duct is installed on a vertical wall, the support can be made by using **metal brackets,** with or without struts (appropriate according to the supplier's certification).
Metal brackets and strut must be thermally protected against fire using **GEOTEC® A U-plaster element.**

1- INSTALL THE BRACKETS AND THE SUPPORT STRUT.

6. Geocol® Glue
7. GEOTEC® A Uplaster element

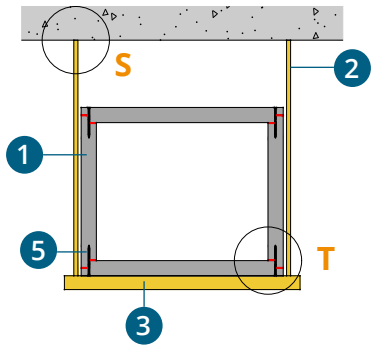
***staples :**
≤ 1250 x 1000 mm (w x h) EI 30/60/90 S.

E) Non protection of the supports

In the case of ventilation ducts with a **inner width (W int) of ≤ 600 mm and a inner perimeter (P int) of ≤ 1900 mm,** it is allowed to remove GEOTEC® A half-shells and GEOTEC® A U-plaster element.

For this purpose, the **steel U-profiles 41x21 must be replaced by 41x41** and the **Ø8 threaded rods must be replaced by Ø12 or Ø14 rods** (depending on the cross-section and the desired fire resistance). Attention, in this case, the anchors used are steel anchors.

Front view



Side view

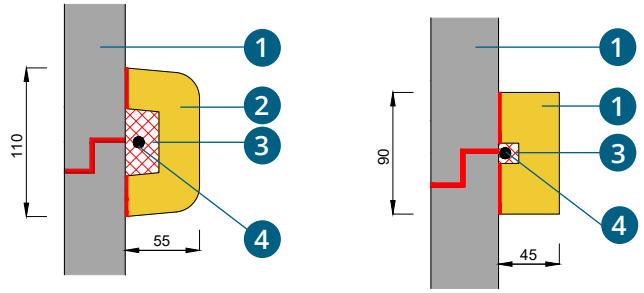
6. Steel anchor **Ø12 or Ø14**
7. Galvanized washers **Ø12 or Ø14**
8. Galvanized nuts **Ø12 or Ø14**

2.4. Alternatives for the protection of the suspension system

With the constant aim of making it easier to install GEOTEC® S ducts, extensions 18/8 and 18/9 of assessments EFR-16-002202 and EFR-16-002203 have been validated to offer an alternative to the protection of threaded rods and steel U-sections.

The **GEOTEC®A** 1/2 shells used to protect the threaded rods may therefore be replaced by a protection in the form of GEOTEC®S boards or GEOTEC®A U-plaster element normally used to protect the steel U-sections.



The **GEOTEC®A** U-plaster element used for protecting the steel U-sections may thus be replaced by a protection in the form of GEOTEC®S boards.

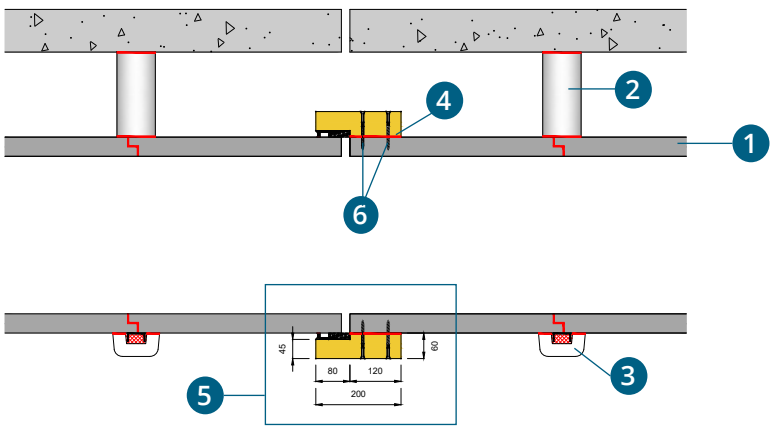
2.6. Dilation joints

Treatment of the crossing of an expansion joint

In the construction of a building, expansion joints must be envisaged in accordance with pre-established rules. It is therefore common for horizontal ducts to pass through expansion joints. It is then necessary to carry out a specific treatment.



1. GEOTEC® S board
2. GEOTEC® A 1/2 shell
3. GEOTEC®A U-plaster element

***staples :**
≤ 1250 x 1000 mm (w x h) EI 30/60/90 S.

* Technical datasheet of Expansion joint element page 23

2.7. Protection of steel ducts

The GEOTEC® product range also allows the protection of existing steel ventilation ducts by directly applying GEOTEC®S boards around the duct. These existing ventilation ducts may be made of galvanised or stainless sheet steel and must have their own support system.

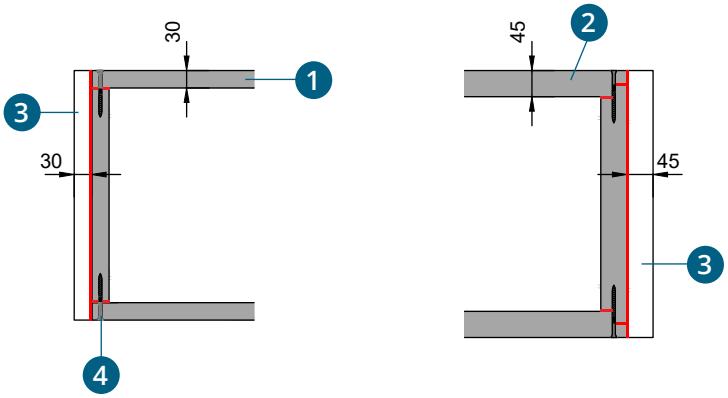
3. VERTICAL SYSTEM

3.1. Assembly principle

The boards are assembled using VBA screws or staples. Screws are inserted without pilot holes. All joints are previousy treated with GEOCOL® glue.

When constructing vertical ducts, the board joints are offset between 2 contiguous faces (between 200 and 800 mm) so as to achieve optimal mechanical strength for the duct.

Cross-sectional view



EI 30/60 (S) **EI 90/120 (S)**

1. Concerning the load-bearing systems

For ducts consisting of 4-board casings (**W int* ≤ 1050 mm** and **D int* ≤ 1100 mm** for **EI 30/60 S** and **W int ≤ 1000 mm** and **D int ≤ 1050 mm** for **EI 90/120 S**), the load bearing system can be carried out on 2 sides only.

In the case of large cross-sections ducts, the number of boards per duct face increases to up to 4.
In this case, load bearing system must be carried out on faces consisting of more than 2 boards.

*W int : inner Width / *D int : inner Depth

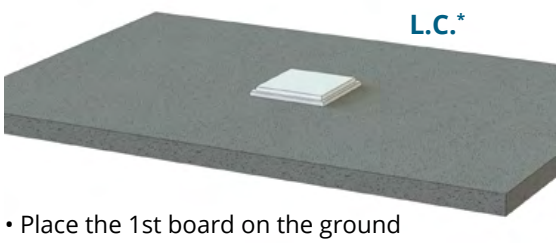
	Solution 2: Using GEOTEC® A internal reinforcement collar.		**74**

Standard installation principle

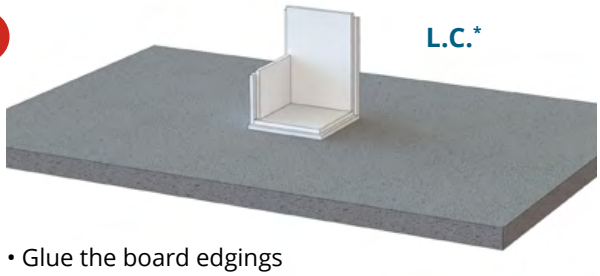
CLICK and watch
THE VERTICAL DUCT ASSEMBLY on video.

1



- Place the 1st board on the ground

2

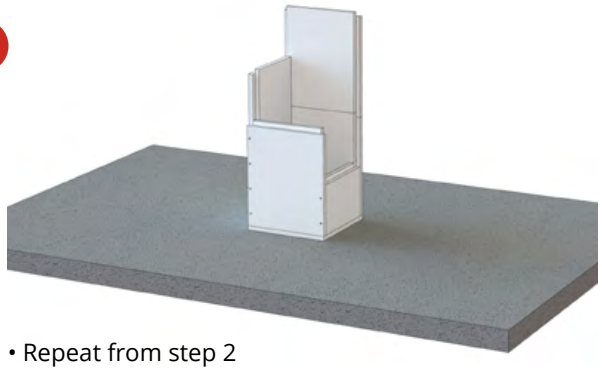


- Glue the board edgings
- Screw the 2 contiguous boards with woodscrews every 120 mm
- Observe an offset of 200 to 800 mm between the horizontal joints

3

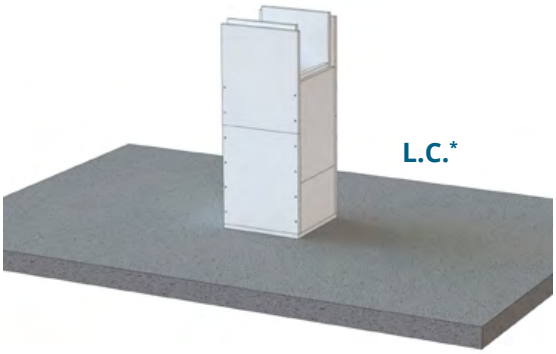
- Glue the board edgings
- Place the other 2 vertical boards forming the 1st chamber
- Screw the boards together with woodscrews every 120 mm

4

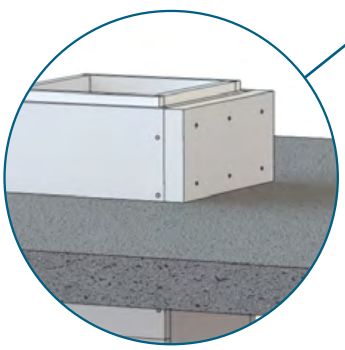


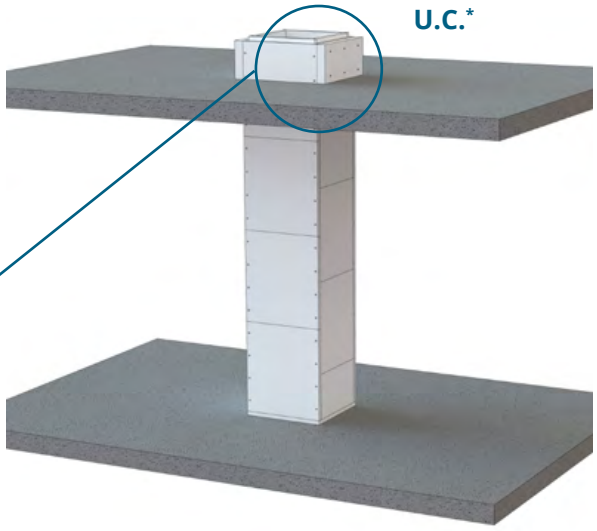
- Repeat from step 2
- Glue and fit together with the previous sections

5



6





- Use glue and screws to place the reinforcement collars on 2 sides of the duct (bearing on the floor). (Height limited to 7 m with 2 supports, and to 10 m with 3)*

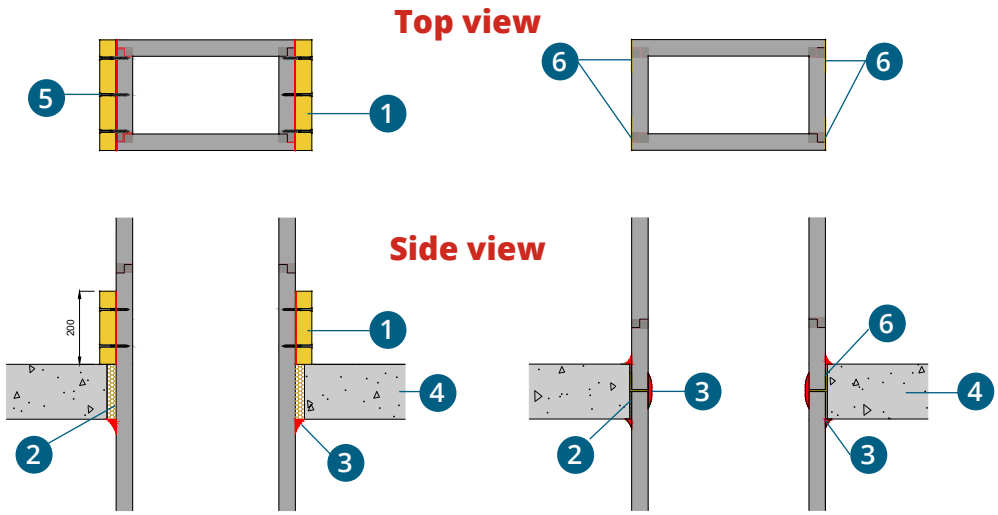
3.3. Alternative support principles

The various load bearing principles shown below are suitable for ducts consisting of 4-board casings (one board per side). In the case of large section ducts (more than 4 boards per casing), these alternative systems will have to be adapted **(see page 67)**.

1. Ducts not attached to walls

A) Support by 2 parallel GEOTEC®A reinforcement collars on the floor.

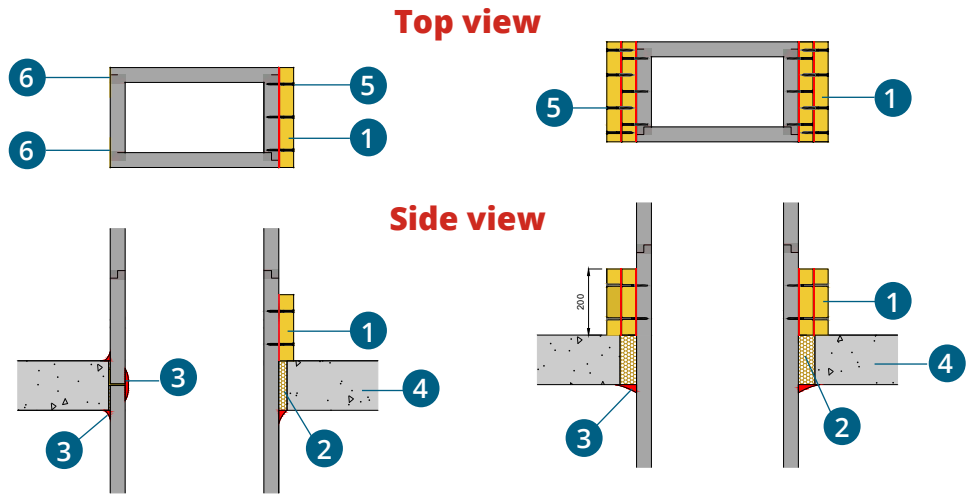
B) Support by 2 parallel corner-pieces on the slab.



1. GEOTEC®A reinforcement collar (glued & screwed)
2. Caulking
3. GEOCOL® Glue
4. Floor
5. Screws
6. Corner-pieces:
   EI 30/60 (S): 35x35x4 mm.
   EI 90/120 (S): 50x50x5 mm.

C) Support by 1 GEOTEC®A reinforcement collar on floor + 1 parallel corner-piece on the slab.

D) Support by 2 double parallel GEOTEC®A reinforcement collars on the floor.



1. GEOTEC®A reinforcement collar (glued & screwed)
2. Caulking
3. GEOCOL® Glue
4. Floor
5. Screws
6. Corner-pieces:
   EI 30/60 (S): 35x35x4 mm.
   EI 90/120 (S): 50x50x5 mm.

+ Height limited to 7 m with 2 supports, and to 10 m with 3 or 4 supports.

2. Ducts adjacent to a wall corner

E) Support by 2 perpendicular GEOTEC®A reinforcement collars on the floor.

F) Support by 2 parallel corner-pieces on the slab and wall.

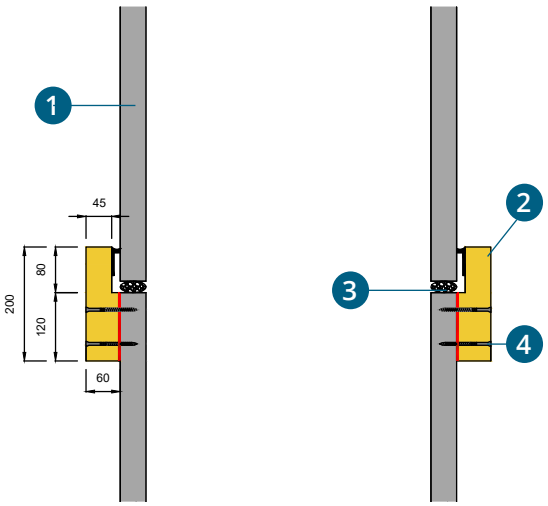
***staples :**
≤ 1250 x 1000 mm (w x h) EI 30/60/90 S.

\+ * Caulking may be carried out using fire-stop polyurethane foam or stone wool (26 kg/m³ mini-mum).

3.5. Dilatation joints

Treatment of the crossing of an expansion joint

In the construction of a building, expansion joints must be envisaged in accordance with pre-established rules.
It is therefore common for vertical ducts to pass through expansion joints. It is then necessary to carry out a specific treatment.



1. GEOTEC® S board
2. GEOTEC® A Expansion joint element*
3. Mineral fiber rope **Ø40**
4. VBA Screws
   Ø 5 x 80 (EI 30/60 S)

Vertical deviation

Take-off point on a vertical duct

installation of a fire damper

installation of a smoke shutter

FIRE PROTECTION FOR CARBON FIBER REINFORCE-MENTS

1. SYSTEM GENERAL OVERVIEW 82

2. PROTECTION UNDER CONCRETE FLOOR SLAB 83

3. PROTECTION UNDER THE BEAM 84

1. SYSTEM GENERAL OVERVIEW

The fire stability of reinforced concrete structures and substrates is obtained by restricting the temperature rise in the steel-work within the concrete.

If the existing load-bearing structures need to be strengthened (in the case of a change of use, anti-seismic confinement, refur-bishment, etc.), one solution involves bonding carbon fibre reinforced boards with an epoxy resin adhesive.

With the aim of guaranteeing the strength and performance of these carbon reinforcements in the event of fire, the solution has to guarantee a temperature of the adhesive used.

This maximum temperature, varying between 45 and 80° C, appears in the technical notes of the manufacturers to whom the reader should refer.

Following the fire resistance tests carried out at the Efectis laboratory, and via the intermediary of Laboratory Assessment EFR-18-001644, GEOSTAFF® proposes validated solutions using GEOTEC®S to protect the carbon fibre reinforcements installed under the floor slab and concrete beam, depending on the desired levels of fire performance and the critical temperatures provided by the manufacturer.

2. PROTECTION UNDER CONCRETE FLOOR SLAB

In this configuration, GEOCOL® adhesive is applied around the periphery of the carbon fibre reinforcement.

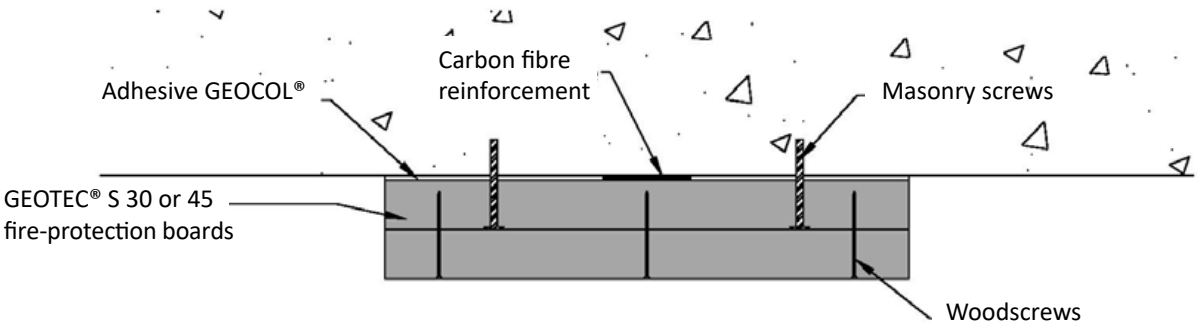
A first protective thickness using GEOTEC®S is attached to the concrete using masonry screws 400 mm apart in both directions.

The second thickness is attached to the first via offset joints, using woodscrews 200 mm apart in both directions.

If a third layer is to be used, it should be fixed to the second layer by means of wood screws every 200 mm.

Desired interface temperature (°C)	GEOTEC®S PROTECTIVE THICKNESS				
	Desired fire performance				
	30 min	60 min	90 min	120 min	180 min
45	2x30 mm (Overlap 100 mm)	2x45 mm (Overlap 100 mm)	2x45 mm (Overlap 350 mm)	3x45 mm* (Overlap 250 mm)	-
60	2x30 mm (Overlap 100 mm)	2x30 mm (Overlap 100 mm)	2x45 mm (Overlap 100 mm)	2x45 mm (Overlap 200 mm)	-
80	2x30 mm (Overlap 100 mm)	2x30 mm (Overlap 100 mm)	2x30 mm (Overlap 100 mm)	2x45 mm (Overlap 100 mm)	2x45 mm (Overlap 100 mm)

* Glue must be applied between each layer



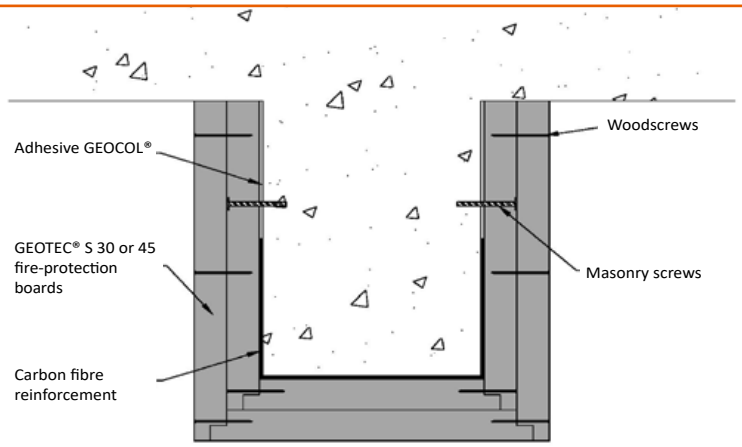
3. PROTECTION UNDER THE BEAM

In this configuration, the beam is clas on three sides. GEOCOL® adhesive is applied around the periphery of the carbon fibre reinforcement.

The first protective thickness of GEOTEC® is attached between the vertical surfaces using masonry screws 400 mm apart. The third surface, corresponding to the bottom of the beam, is attached to the boards previously held in place with woodscrews 200 mm apart.

The second thickness is attached to the first via offset joints, using woodscrews 200 mm apart in both directions.

If a third layer is to be used, it should be fixed to the second layer by means of wood screws every 200 mm.



Reinforcement installed on the bottom of the beam

Desired interface temperature (°C)	GEOTEC®S PROTECTIVE THICKNESS			
	Desired fire performance			
	30 min	60 min	90 min	120 min
45	2x45 mm	2x45 mm	3x45 mm	-
60	2x45 mm	2x45 mm	2x45 mm + 30 mm	3x45 mm
80	2x30 mm	2x45 mm	2x45 mm	2x45 mm

Reinforcement installed on the side of the beam

Desired interface temperature (°C)	GEOTEC®S PROTECTIVE THICKNESS			
	Desired fire performance			
	30 min	60 min	90 min	120 min
45	2x45 mm	2x45 mm	2x45 mm + 30 mm	3x45 mm*
60	2x30 mm	2x45 mm	2x45 mm	2x45 mm + 30 mm
80	2x30 mm	2x30 mm	2x45 mm	2x45 mm

* Glue must be applied between each layer

120				87,5

DOCUMENTATION nr. EFR-19-002200
The inspection hatches are tested with an indifferent direction of fire

PRODUCT DESCRIPTION

GEOSYSTEM® V60 & V120 inspection hatches consist of a frame made of fire-resistant plasterboard and two successive leaves.

The first leaf, which acts as an aesthetic covering, is opened/closed by simply pressing on the hatch, while the second, which can be removed, is equipped with two steel pins to remove it.

APPLICATIONS

Easy to install and in compliance with current standards, **GEOSYSTEM® V60 & V120** inspection hatches, with fire resistance ratings EI 60 and EI 120 (FP1H and 2H), can be installed in technical ducts, solid walls or as passage openings in partition walls.

USAGE

The inspection hatches **GEOSYSTEM® V60 & V120** can be installed:
- **GEOTEC®** and **GEOFLAM®** protection of service ducts and shafts
- Solid walls
- Partitions or false walls
- Plasterboards walls

TRANSPORTATION AND STORAGE

Transport and store on a flat, protected surface. Keep away from water.

Dimensions

EI (mm)	Dimensions of the door	Thickness of the frame	Width of the frame	Thickness or height of the latch	Total Thickness
	AxB (mm)	C	D	E	Z
60	200 x 200 up to 1500 x 1000	30	55	-	45
120		50	55	30	80

Hatches of special dimensions may be constructed.

PRODUCT DESCRIPTION

The inspection hatch consists of two aluminium profile frames (1 fixed and 1 opening) and finished off with plasterboard.

The two frames of the inspection hatch comprise four aluminium profiles attached rigidly to one another by means of a special welding technique.
An intumescent seal is placed around the periphery of the door and the fixed frame.

The hatch is fitted with two locking systems (cable and snap-hook).

For safety, these systems must always be hooked up before closing the door panel. The invisible spring closures allow opening and closing by a simple pressure on the hatch.

APPLICATIONS

The **GEOSTAFF®** inspection hatches must be installed vertically in order to access the service ducts and shafts (Document 12-A-119 Rev.1 & Extensions 15/2 and 15/3). With a fire-protection time of EI 60 and 120 (1 hour and 2 hour fire-protection), our inspection hatches can be installed on our **GEOTEC®** and **GEOFLAM®** products.

USAGE

Installed in protective systems for service ducts and shafts, **GEOTEC®** and **GEOFLAM®**.

TRANSPORTATION AND STORAGE

Transport and store on a flat, protected surface. Keep away from water.
